

Hyaluronic acid (also called Hyaluronic or hyaluronate) is a non-sulfated glycosaminoglycan – a long linear polysaccharide. It is distributed widely throughout connective, epithelial, and neural tissues. Average human body contains about 15 grams of hyaluronic acid, one-third of which is degraded and replaced every day.

Hyaluronic Acid

Collagen & Elastin Fibers

Skin is supported from below by collagen and elastin fibers that form the sponge-like structure of the connective tissue. The spaces within this structure are filled with an interstitial fluid that consists of water, salts, proteins, and hyaluronic acid. This jelly-like complex transports oxygen and essential nutrients from the bloodstream to the skin cells. Hyaluronic acid is a primary component of this complex because of its very high affinity for water molecules. It can absorb and hold water up to 1,000 times its weight.

Hyaluronic acid is also involved in tissue repair and contributes significantly to cell proliferation and migration. If skin is excessively exposed to UVB rays, it becomes inflamed (sunburn) and the production rate of hyaluronic acid diminishes as its degradation rate accelerates.

BIOREGENE Hyaluronic Program is an intense hydration and regeneration system for professional use that drastically improves the appearance of the skin. It is ideal for any skin that shows signs of dryness or aging as in case of:

- Sensitive skin
- Sensitive skin with couperose
- Dry or Dehydrated (very dry) skin
- Wrinkled skin
- Asphyxiated skin
- Mixed skin

BIOREGENE Hyaluronic Program is especially beneficial in diminishing the erythema and oxidation damage caused by solar exposure. It reduces redness quickly and reinforces the connective tissue to prevent development of lines and wrinkles.

Performance characteristics & active ingredients

BIOREGENE Hyaluronic Program performs important dermatological functions as follows:

- **Intense and profound hydration of the skin**
SODIUM HYALURONATE
HYDROLYZED GLYCOSAMINOGLYCANS (precursor of Hyaluronic Acid)
- **Fortifying, elasticizing, and smoothing action**
COLLAGEN
- **Skin softening and toning action**
PROPYLENE GLYCOL, GLUCONOLACTONE, SALICYLIC ACID,
HYDROGENATED POLYISOBUTENE, PPG-15 STEARYL ETHER,
HYDROXYETHYLCELLULOSE.

Ingredients: **(Hyaluronic Solution)**

Ref. 237-A

AQUA,
PROPYLENE GLYCOL,
HYDROLYZED GLYCOSAMINOGLYCANS,
PHENOXYETHANOL,
RICINOLETH-40,
PHENETHYL ALCOHOL,
SODIUM BENZOATE,
SALICYLIC ACID,
HYDROXYETHYLCELLULOSE,
GLUCONOLACTONE,
SODIUM HYALURONATE,
PARFUM,
RIBOFLAVIN.

(Hyaluronic Collagen Mask)

Ref. 237-B

COLLAGEN, HYDROGENATED
POLYISOBUTENE, PPG-15 STEARYL
ETHER, PEG-40 SORBITAN PROLEATE.

Packaging:

Available in professional version

BIOREGENE Hyaluronic Program

Ref. 237K

Kit of 5 professional treatments

5 x BIOREGENE Hyaluronic Solution
Monodose bottles - 50 ml

5 x BIOREGENE Hyaluronic Masks
Monodose Masks
