

CHOLLEY Hand Cream is an anti-aging cream & whitening for hands, arms, elbows, and feet. The moisturizing and nourishing factors of **CHOLLEY Hand Cream** slow the aging process and give elasticity and softness to the skin for a smooth and younger appearance. They also help reinforce nails and prevent cuticles.

Hands are the zone of the body most exposed to solar radiations and environmental factors. They constantly come in contact with germs and bacteria, as well as numerous organic and inorganic compounds used in our daily activities. Some of these compounds are strong detergents such as soaps and washing liquids, which aggressively remove natural oils and moisture from the skin. They destroy skin's natural acid barrier, leaving it dry and exposed to bacterial and microbial aggression.

Other compounds such as decolourants and bleach are highly penetrating and cause irritations. A major step in maintaining the beauty of the hands and preventing their premature aging is to minimize the impact of external factors.

Performance characteristics & active ingredients

CHOLLEY Hand Cream performs important dermatological functions as follows:

- **Diminishes age spots and harmonizes the appearance and texture of the skin**
ARBUTIN
ORYZA SATIVA
ALLANTOIN
