

CHOLLEY Ocean Breeze Program is an anti-stress mask for treatment of skin that needs rehydration and reinvigoration. Rich in marine extracts, it is a soothing gel-mask with a beautiful fresh feel and an enchanting perfume. Its constituents include:

- ❖ **Sargassum Muticum** - obtained from a large brown seaweed that grows in temperate and tropical oceans. It generally inhabits shallow waters and coral reefs. Its extract is strongly hydrophilic, and as a natural anti-pollutant protects the skin against oxidation.
- ❖ **Durvillea Antarctica** - a robust kelp that grows in sub-polar shores of New Zealand and Chile. Its extract is rich in **alginic acid**, which is very effective against free radicals that cause cellular degeneration and aging.
- ❖ **Hippophæ Rhamnoides seed Oil** - extracted from **Sea-buckthorn** that grows naturally throughout mainland Asia. Well-known for its haemostatic and anti-inflammatory properties, sea-buckthorn oil is used over centuries internally and topically for gastro-intestinal and dermatological disorders.

CHOLLEY Ocean Breeze Program is especially recommended whenever the skin feels tense or stressed. It is perfect and in warm or humid climates, in particular as an anti-pollutant treatment. Its combined use with **BIOCLEAN AHA Peeling Program** delivers very excellent results.

Performance characteristics & active ingredients

The principal dermatological properties of **CHOLLEY Ocean Breeze Program** may be summarized as follows:

- **Soothing and anti-stress action**
HIPPOPHÆ RHAMNOIDE SEED OIL
HELIANTHUS ANNUUS (SUNFLOWER) SEED OIL
