

CHOLLEY Alpine Solar Defense SPF 50 is a fine and very effective emulsion for maximum protection of the skin against solar radiations. It uses an advanced new technology that allows creation of a light pleasant emulsion despite a high concentration of UVA and UVB filters.

CHOLLEY Alpine Solar Defense SPF 50 also contains Alpine Artemisia (*Artemisia umbelliformis* Lam.), a phyto extract known for its anti-aging and antioxidant properties against stresses provoked by reactive oxygen. Artemisia grows in the Alps in altitudes between 2000 and 3200 meters. It is well known for its healing properties and is very often considered, next to Edelweiss (*Leontopodium alpinum* Cass.), as the other symbol of the Alps.

Performance characteristics & active ingredients

CHOLLEY Alpine Solar Defense SPF 50 performs principal dermatological actions as follows:

- **UV protection (SPF50)**
