

Alpha hydroxy acids (also called fruit acids) belong to a naturally occurring class of acids found in fruits and other foods. These acids have a long history of use in cosmetics reaching all the way back to the ancient Mesopotamian civilizations. They help improve softness, uniformity, hydration, and the barrier function of the skin. These precious properties when coupled with select precursors of collagen fibers and vitamins deliver a truly remarkable anti-aging effect by enhancing the cell renewal process of the epidermis and the connective tissue.

BIOCLEAN Professional AHA Program delivers a powerful exfoliating & regenerating action that eliminates encrustations of dead cells and impurities, perks up the skin by boosting its capillary circulation and oxygenation giving the skin a bright, uniform, and well-hydrated look.
